

Seamless integration Expand your AEOS system with Aperio® wireless locks

The integration between ASSA ABLOY Aperio wireless lock technology and AEOS provides you with the flexibility to add access control features to almost every opening in any environment.

Using the powerful AEOS Blue door controller, Aperio battery-powered locks communicate with AEOS to create a fully integrated and managed access control solution.

As a result, security and facility managers now have greater control, can easily respond to organizational changes and only need to monitor a single security system, while users only require a single RFID access control card.

Aperio integration is proudly supported by

ASSA ABLOY

nedap

Add AEOS access control to all your openings – it is wireless and cost effective

No matter the door type; with Aperio you can integrate even glass doors, server racks or cabinets into your access control system

Nedap developed the AEOS access control system based on open IT standards. As a result, you can easily integrate third-party hardware as well as access control functionality and asset management. An integrated approach means you only need to maintain one platform. This lowers costs and increases user-friendliness. You have just one software system that allows you

to add and manage Aperio hardware, now and in the future, offering real added value. Aperio escutcheons, cylinders, locks and handles are cost-effective extensions of Nedap's established AEOS physical access control system, enabling a greater number of doors to be controlled.

Two of a kind – Aperio and AEOS

Aperio battery-powered locks integrate seamlessly with your AEOS access control system

Real-time control
Aperio supports online and offline door control

Easy to install
Without cabling the door and in most cases, without even drilling.

Cost effective
Aperio battery-powered devices save installation and energy costs. Not to mention the cost of lost keys.
