

# Enterprise Professional Services: Consultancy

## Getting the most out of your access management

Through our Enterprise Professional Services, we provide a 3-pillar approach designed to help you get the most out of your Nedap access management platform: Consultancy, Deployment Toolkit, and Client Care.

Our services offer you assistance in the complete implementation of your Nedap access management platform. But you can also choose the service(s) you need at any point in your access control journey.

## Consultancy

### Platform

Design

Implementation

Optimisation

Upgrades

### Deployment

Framework

Governance

Controller configuration

## Consultancy

There are two parts to our consultancy services: Platform services and Deployment services.

### Platform services

In today's complex security landscape, physical access control is rarely a standalone solution but one that must seamlessly integrate with other business and security applications. You can have your Nedap access control system expertly set up, and maintained throughout its lifecycle, using our platform services: **Design, Implementation, Optimisation, and Upgrades.**

### Deployment services

Deployment involves physically installing controllers and readers, configuring access rights, and the logistics around producing and distributing identifiers such as badges. Depending on your needs, it can involve coordination between integrators, in-house installers, IT network teams, IT application support teams, and your local facilities teams.

Our deployment services cover everything from setting up your framework and deployment governance, to configuring controllers.

## Let's talk

Want to chat through your specific needs? Or get more info on what we offer through our Enterprise Professional Services?

We'd love to hear from you.
