# Enterprise Professional Services: Deployment Toolkit

Getting the most out of your access management

Through our Enterprise Professional Services, we provide a 3-pillar approach designed to help you get the most out of your Nedap access management platform: Consultancy, Deployment Toolkit, and Client Care.

Our services offer you assistance in the complete implementation of your Nedap access management platform. But you can also choose the service(s) you need at any point in your access control journey.

Consultancy

Platform
- Design
- Implementation
- Optimisation
- Upgrades

Deployment
- Framework
- Governance
- Controller configuration

Deployment Toolkit
- Security Design Configurator (SDC)
- Deployment framework templates

Client Care
- Service Level Agreement (SLA)
- Power user training

Deployment Toolkit

- Security Design Configurator (SDC)
- Deployment framework templates

Deployment Toolkit

There are two tools to our toolkit services: Security Design Configurator (SDC) and Deployment framework templates.

Security Design Configurator (SDC)

To help speed up your design process and make your requirements radically clear to everyone involved, the SDC is your collaborative design tool and your single source of truth from start to finish.

With the SDC, you benefit from:
- Working together in one platform with all stakeholders
- Creating uniform and clear security designs
- Reducing design time and manual labor
- Improving design quality and accuracy

Deployment framework templates

Use our tried-and-true set of templates of predefined stages for successful deployments, which can be tailored to your needs using our Deployment services. Ensure that your stakeholders and in-house teams know what's expected of them, and when, with custom deployment and installation guides, and more.

Let's talk

Want to chat through your specific needs? Or get more info on what we offer through our Enterprise Professional Services?

We'd love to hear from you.
