Nedap expands partnership with Albert Heijn with mobile access

Enabling secure and convenient mobile access for employees across Albert Heijn's organization

Nedap (AMS:NEDAP), a global leader in Digital Twin Technology and access management solutions, announces the expansion of its partnership with Albert Heijn, with the introduction of Nedap Mobile Access across the offices of Albert Heijn, Etos, Gall & Gall, and Ahold Delhaize in the Netherlands.

With mobile access, employees can securely access office buildings and facilities using their smartphones via Apple Wallet and Google Wallet. This reduces reliance on physical access badges while simplifying access management and improving convenience for employees.

The expansion builds on a long-standing relationship between Nedap and Albert Heijn and reflects the increasing adoption of mobile credentials in large-scale retail environments.

Mobile access enables employees to store their credentials on their devices and use near-field communication (NFC) technology to gain entry to secured areas. This supports more efficient credential management and a scalable, future-ready approach to access control.

“Albert Heijn is taking a clear step by bringing mobile access to its employees,” said Tom van Middendorp, Solution Consultant at Nedap. “It makes access easier and more secure, using the devices people already rely on every day.”

With this step, Nedap continues to support organizations in making the shift toward mobile-first access control.
